

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application.

1-20. (Cancelled)

21. (new) A method for determining which advertisements to include with electronic content delivered to users over a network, the method comprising the steps of:
- storing data that indicates delivery criteria and delivery obligations for each of a plurality of contracts, wherein each contract is associated with an advertiser of a plurality of advertisers,
- wherein each contract of the plurality of contracts is associated with a separate advertisement of a plurality of advertisements,
- wherein a first contract with a first advertiser of the plurality of advertisers was formed before a second contract with a second advertiser of the plurality of advertisers;
- after the plurality of contracts have been formed, receiving a request to provide over said network a piece of electronic content that includes a slot for an advertisement;
- reading said data to determine delivery criteria associated with the plurality of contracts;
- comparing slot attributes of said slot with delivery criteria of said plurality of contracts to determine a subset of said plurality of advertisements which qualify for inclusion in said slot,

wherein both a first advertisement associated with the first contract and a second advertisement associated with the second contract qualify for inclusion in said slot,

wherein the second contract is associated with a behindness value that is currently greater than a behindness value associated with the first contract,

wherein the behindness value of each contract reflects how far behind a content provider is on satisfying the delivery obligations associated with each contract; and

from said subset of advertisements, selecting said first advertisement to include in the slot based, at least in part, on the first contract having been formed before the second contract.

22. (new) The method of Claim 21, wherein:
- the method further comprises the step of determining which advertisements in the plurality of advertisements are associated with delivery obligations that are not on track to be satisfied; and
- the step of determining a subset of said plurality of advertisements which qualify for inclusion in said slot includes selecting for said subset only advertisements that are associated with delivery obligations that are not on track to be satisfied.
23. (new) The method of Claim 21, wherein the step of comparing slot attributes of said slot with delivery criteria of said contracts to determine a subset of said plurality of

advertisements which qualify for inclusion in said slot is performed in response to receiving said request.

24. (new) The method of Claim 23, wherein:
the request was made by a specific user; and
at least one of said slot attributes, which are used to determine which advertisements qualify for inclusion in said slot, corresponds to information associated with the specific user.
25. (new) The method of Claim 21, wherein the piece of electronic content is a web page.
26. (new) The method of Claim 21, wherein the piece of electronic content is a video stream.
27. (new) The method of Claim 21, further comprising the steps of:
associating a priority class with each of said plurality of advertisements; and
filtering out of said subset one or more advertisements that have a priority class that is lower than the priority class of any other advertisement that belongs to said subset.
28. (new) The method of Claim 21, further comprising the step of filtering out of said subset all advertisements that are associated with delivery obligations that are on track to be satisfied.

29. (new) The method of Claim 21, wherein each contract of the plurality of contracts is formed regardless of the impact that delivery obligations associated with said each contract may have on the ability to satisfy delivery obligations associated with any contracts, of said plurality of contracts, that were formed previous to formation of said each contract.
30. (new) A computer-readable storage medium storing instructions for determining which advertisements to include with electronic content delivered to users over a network, which instructions, when executed by one or more processors, causes the one or more processors to perform the steps of:
- storing data that indicates delivery criteria and delivery obligations for each of a plurality of contracts, wherein each contract is associated with an advertiser of a plurality of advertisers,
- wherein each contract of the plurality of contracts is associated with a separate advertisement of a plurality of advertisements,
- wherein a first contract with a first advertiser of the plurality of advertisers was formed before a second contract with a second advertiser of the plurality of advertisers;
- after the plurality of contracts have been formed, receiving a request to provide over said network a piece of electronic content that includes a slot for an advertisement;
- reading said data to determine delivery criteria associated with the plurality of contracts;

comparing slot attributes of said slot with delivery criteria of said plurality of contracts to determine a subset of said plurality of advertisements which qualify for inclusion in said slot, wherein both a first advertisement associated with the first contract and a second advertisement associate with the second contract qualify for inclusion in said slot, wherein the second contract is associated with a behindness value that is currently greater than a behindness value associated with the first contract, wherein the behindness value of each contract reflects how far behind a content provider is on satisfying the delivery obligations associated with each contract; and from said subset of advertisements, selecting said first advertisement to include in the slot based, at least in part, on the first contract having been formed before the second contract.

31. (new) The computer-readable storage medium of Claim 30, wherein: the instructions include instructions which, when executed by the one or more processors, further cause the one or more processors to perform the step of determining which advertisements in the plurality of advertisements are associated with delivery obligations that are not on track to be satisfied; and the step of determining a subset of said plurality of advertisements which qualify for inclusion in said slot includes selecting for said subset only advertisements that are associated with delivery obligations that are not on track to be satisfied.

32. (new) The computer-readable storage medium of Claim 30, wherein the instructions include instructions which, when executed by the one or more processors, further cause the one or more processors to perform the step of comparing slot attributes of said slot with delivery criteria of said contracts to determine a subset of said plurality of advertisements which qualify for inclusion in said slot is performed in response to receiving said request.
33. (new) The computer-readable storage medium of Claim 32, wherein:
the request was made by a specific user; and
at least one of said slot attributes, which are used to determine which advertisements qualify for inclusion in said slot, corresponds to information associated with the specific user.
34. (new) The computer-readable storage medium of Claim 30, wherein the piece of electronic content is a web page.
35. (new) The computer-readable storage medium of Claim 30, wherein the piece of electronic content is a video stream.
36. (new) The computer-readable storage medium of Claim 30, wherein the instructions include instructions which, when executed by the one or more processors, further cause the one or more processors to perform the steps of:
associating a priority class with each of said plurality of advertisements; and

filtering out of said subset one or more advertisements that have a priority class that is lower than the priority class of any other advertisement that belongs to said subset.

37. (new) The computer-readable storage medium of Claim 30, wherein the instructions include instructions which, when executed by the one or more processors, further cause the one or more processors to perform the step of filtering out of said subset all advertisements that are associated with delivery obligations that are on track to be satisfied.
38. (new) The computer-readable storage medium of Claim 37, wherein each contract of the plurality of contracts is formed regardless of the impact that delivery obligations associated with said each contract may have on the ability to satisfy delivery obligations associated with any contracts, of said plurality of contracts, that were formed previous to formation of said each contract.
